

CWC 'How to' – How to embed audio/videos files

Step 1

Log into the back-end or administrator side of your site.

1. Click on Content, Article Manager
2. Choose an article, open by clicking on the article's title

Dealing with the code...

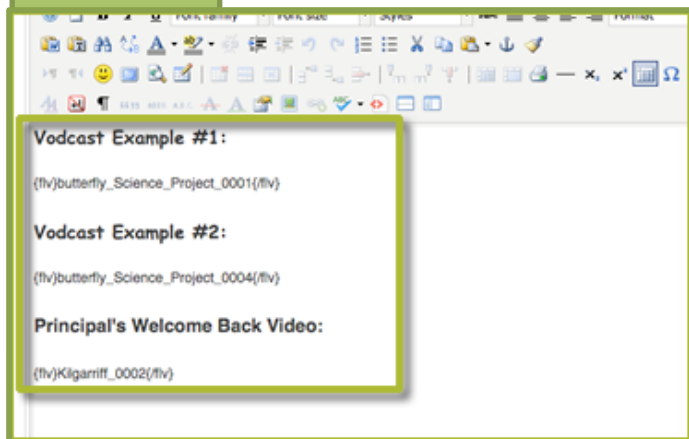

To embed the file, you will need to type in a little bit of code (see the 'Available tags' table on page 2). In the body of the article, locate an area where you would like to embed the audio/video file.

- Click once and type in the 'tag' that matches the file format. For example, if you are embedding a 'flv' video file, you would type in:

```
{flv}name_of_the_file{/flv}
```

- **Do not type** in the entire file name, only the beginning (without the extension, ie flv, mov, mp3, mp4)
- Make sure to type in the file's name exactly as you saved it in the audio/video folder. The program is *case sensitive*, so make sure to match the upper/lower case letters.

Step 2

Once you type in the code:

1. Click the Save button
2. Click **Preview** to view the front of the site
3. Navigate to the article that contains your audio/video file

Step 3

Podcast and Vodcast Examples
Vodcast Example #1:

View your audio/video file:

1. Click on the 'play' button

Congratulations you have uploaded and embedded an audio/video file!!
